# Project Commander is the leading project planning software in construction for cost and ease of use - especially for companies £1m-£50m

Project Commander is one of the easiest to use and the most cost effective planning solutions around today and can exchange information with Microsoft Project , PowerProject.

Cost advantage
The cost of single licence for a stand-alone or for a network is only £195-395. For office based staff for £395, all staff can have access to Project Commander. Further licences cost only £195. This means massive savings against competitors such as PowerProject - where one licence costs nearly £1300 (including Maintenance) with minimal extra user discounts; and Microsoft Project which costs around £500 and there is no network version.

Easier to use
Since Project Commander is WYSIWYG, what you see on the screen is exactly how it prints. It is highly graphical and allows you to draw bars, link bars and move bars with the mouse. It fits the chart exactly to the page. Microsoft Project is notoriously awkward when it comes to printing.

Project Commander is used even down at Site Manager level to create short-term plans or update contract programmes. Anyone can create a professional Tender plan with client Cost graph quickly with little training.

Competitive features
Both Project Commander and PowerProject were written specifically for the construction industry, but Microsoft Project lacks many features. There is an extensive comparison with MS Project on our website, along with a full list of all features.
Training
Project Commander can used straight out of the box with no training. You will never need more than one day's training to get to grips with most of Project Commander's features - unlike our competitors.

We offer training at your office or low cost live short courses over the internet at times to suit you - even out of hours or at weekends.
Project Commander comes with a free Viewer can be downloaded off the web. This allows both users and clients to view/print project files without the ability to change data & without the cost of any licence.

MANAGING PROFIT
For projects that use some or all in-house resources, Project Commander can forecast Profit. You can enter against each task a Revenue figure based on the valuation in the Estimate. The costs will represent the actual task costs and the schedule and costs will be updated as the project progresses. You can then graph Forecasted Cost against Revenue.

MANAGING CASHFLOW
Where a Baseline is saved, you can graph Actual versus Original Plan and predict forward.

FORECASTING VALUATIONS
Project Commander calculates periodic valuations per calendar month (or weekly) using a Cost Graph or calculating Actual Cost to Date using Actual %.
Using the graph, it can assist in predicting movements in future valuations.
